To whom it may concern,  
Look what happen to t environment when we introduced rabbits, cane toads, wild donkeys, camels, foxes n a host of foreign forna, plants shrubs trees etc. It has devastated t native environment of Australia

Now companies want to introduce foreign material into our food supply, or change genetic codes of food to make them more profitable...,when do u stop when scientists think they can produce better crops than God or Mother nature

Therefore,  
I support expanding the definition for 'gene technology' so FSANZ continues to assess and regulate all techniques and methods of genetic modification, other than conventional breeding. The proposal to deregulate new and emerging GM techniques and their food products, which pose new and unassessed risks, is completely unacceptable.

Thank you for taking my well-founded and informed concerns into consideration.

Yours sincerely,
