

**SUBMISSION FOR APPLICATION A1041 – FOOD DERIVED FROM
STEARIDONIC ACID SOYBEAN LINE MON87769**

**Food Policy and Programs Branch, SA Health
16 December 2010**

Thank you for the opportunity to provide comments to the 1st Assessment Report for A1041. SA Health *supports* proceeding with development of an amendment to Standard 1.5.2.

It is considered important that any food derived from this line of GM soybean is labelled as 'genetically modified' due to the modified composition of the soybean oil. Consideration should also be given to the raised trans fatty acid levels in this soybean line and its effect on dietary intakes. Information on TFA levels should also be displayed on the label of derived foods.
