Subject: RE: FSANZ Notification Circular - Subscribers [23-15] [25 September 2015] [Sec: UNCLASSIFIED]

Comments. What to say. Both Round Up and Glufosinate are in the corn and toxic. The executive page does not mention this. The point is as usual missed and the con job continues. Can somebody please tell me why we need this poison in the country. I am so sick of this rubbish while the world gets sicker from sprays and toxins. I have sent , over the last four years so much scientific evidence that shows GE crops are toxic that I can only come to the conclusion that there is something sinister going on between the western regulatory authorities the western governments and the World Government to poison us and make us sterile to reduce the population. How many more years do we have to suffer this nonsense before Round Up is banned, together with 24D, glufosinate and neo-nicinitoids for a start. You know i9t is a con job, we know it is a con job, the chemical companies know it is a con job. For heavens sense come to your senses. Hugh Halliday.
