**Subject:** Submission on A1193 Irradiation of all fresh fruit and vegetables

To Whom It May Concern:

I've just become aware of the submission to irradiate fresh food for all of Australia, not just for overseas export.

I am not a scientist but as an Australian consumer, my reaction is negative to eating irradiated food. It may be done all over the world but I would like to point out that just because it's 'common' doesn't make it safe.

As an experienced funeral director, I know that over 50% of the Australian public dies from cancer.

How on earth can we justify adding to an already toxic load in the average Australian diet?

It sounds so 'logical' in your proposal but science devoid of common sense is dangerous.

Thank you.
