Subject: FSubmission: on A1193 All 'fresh' fruits and vegetables to be Irradiated

Categories: [REDACTED]

It has come to my attention there is proposal to irradiate all fresh fruit vegetables in Queensland. I live in Victoria, and we get a lot of produce from Queensland.

It is very concerning the industry is proposing such a thing, in my experience and research into matters related to nutrition and health, irradiating fresh produce will produce an added toxic load for the body to deal with, on top of the herbicides conventional produce are exposed to.

There are increasing levels of chronic disease & obesity Australia wide, attributed to a great extent to foods that are processed, low nutritional value, environmental toxins incl herbicides. Adding irradiation to the mix will compound the problem.

I object and do not consent to fresh fruits and vegetables being irradiated, a lot of my family, friends and clients feel the same way, and hereby urge this proposal be rejected.

Sincerely
