To whom it concerns,

I don't want to eat genetically modified (GM) foods.

I therefore strongly oppose changes to the Food Code that would allow a wide range of GM foods, made using novel methods that have scant history of safe use, to be sold without safety assessment or labelling. Gene editing techniques have been found to make genetic changes that could never occur in nature and to result in widespread genetic damage that often goes undetected by GM developers.

I am deeply concerned that FSANZ has relied on advice from scientists with serious conflicts of interest, to conclude these new GM foods pose no greater risks than existing foods. Those seeking to commercialise GM plants, animals and microbes should play no role in deciding how - or even whether - foods derived from them should be regulated.

The proposed changes would make Australia one of very few countries in the world to allow genetically modified animal products into our food chain with no regulation or labelling.

I support expanding the definition for 'gene technology' so FSANZ continues to assess and regulate all techniques and methods of genetic modification, other than conventional breeding. The proposal to deregulate new and emerging GM techniques and their food products, which pose new and unassessed risks, is completely unacceptable.

Thank you for taking my well-founded and informed concerns into consideration.

Yours sincerely,
