To whom it concerns,

I am plagued with food intolerances that now see me buying low fodmap food only. When I look around my own community I'm finding that the tiniest little cafes have heard of, and provide for food intolerances. /they have to in order to stay in business. I'm 72 and tired of always having to suffer the consequences of making a simple mistake. Many years ago I had to choose never to eat away from home. And even, here at home, I can't trust the food that I have bought. I like fruit that doesn't look identical to another. I like to see the imperfections because then I feel certain that it very likely won't hurt me. I'm just glad that I don't have too much longer to try and work out what has been tampered with to such an extent that the only thing it appeals to is the eye. Certainly not the taste buds or the digestive system. I support expanding the definition for 'gene technology' so FSANZ continues to assess and regulate all techniques and methods of genetic modification, other than conventional breeding. The proposal to deregulate new and emerging GM techniques and their food products, which pose new and unassessed risks, is completely unacceptable.

Thank you for taking my well-founded and informed concerns into consideration.

Yours sincerely,
